

CADDLE

Job Title: Database Administrator (DBA)

Reports To: Head of Technology

Location: St. Catharines, ON

Who We Are

Caddle is a consumer insights and mobile engagement company that connects brands with their customers. We know what people buy, how they think, and help our customers sell more stuff. Caddle is a consumer platform where people can earn money for engaging with brands.

We're growing our technology team to satisfy tremendous demand for the Caddle platform from both members (users) and clients. If you're able to be pretty independent and can remove most of your own roadblocks before they become major problems, you may have what it takes!

Duties and Responsibilities

- Database planning, maintenance, and development.
- Act as part of the team responsible for managing and supporting our Amazon Aurora / RDS cluster.
- Database change management.
- Database related application design and code review.
- Provide support to business users as required.

Minimum Qualifications and Skills

- College or University degree in Computer Science or related discipline
- 5+ years MySQL or other database systems DBA experience
- Expert level SQL Skills (queries, joins, stored procedures, views, etc.)
- Knowledge of agile development / scrum / lean / kanban
